

## ***USYS Web Server***

### **General**

USYS Web Server is an optional software application that enables the display of information from USYS 8000 processors (versions: JACKETMASTER, CELLMASTER and WALLMASTER) from Zumbach at a remote terminal. This new application kit can be retrofitted to any already installed processor by means of an ETHERNET interface and a software upgrade.

### **Main Features**

- No need for additional installation - the customer uses his own browser which is already installed.
- Self explanatory handling – view the information of the USYS processor like navigating in Internet.
- The displayed information can be in both numerical and graphical format (strip charts, SPC data, cross section display and others).
- The communication to the terminal is realized through a local area network (LAN) using an ETHERNET PCB of the USYS processor.
- The information from the USYS processors are visible in the remote computers using different operating systems, such as Windows™, Unix/Linux, Macintosh etc., using the following browsers: Internet Explorer 6.0, Netscape 7.1, Mozilla 1.5.
- Automatic updating of the remote information.
- The different users connected can view different pages at the same time.
