

## Cost-effective wall thickness and eccentricity measurement with easy operation

Zumbach Electronics presents a cost-efficient solution for wall thickness and eccentricity measurement of single layer tube products from small to large.

Cost-effective solutions and easy operation are now more than ever in demand. Thanks to the new WALLSTARTER solution from Zumbach Electronics, significant cost savings can now quickly and very easily be realized.

With the proven non-contact ultrasonic measurement technology, wall thicknesses can simultaneously be measured and displayed on 4, 6 or 8 points. Thanks to the continuous quality control, material savings can thus be achieved during the entire production process.

A WALLSTARTER package includes the well known and proven UMAC CI measured value processor and a USYS WALLSTARTER processor display unit, available as a tabletop or 19" rack mountable model.

If the customer wants to integrate after a certain time complex optimizations or even automatic control loops, a simple upgrade to a WALLMASTER system is possible at any time with minor costs.

WALLSTARTER Processor and display kit with typical display
