

Many orders for ZUMBACH ODEX® 10 Concentricity gauge

The ODEX® 10 non-contact concentricity gauge from Zumbach Electronic AG (Pat. pend.) sees an increasing success with orders from companies worldwide.

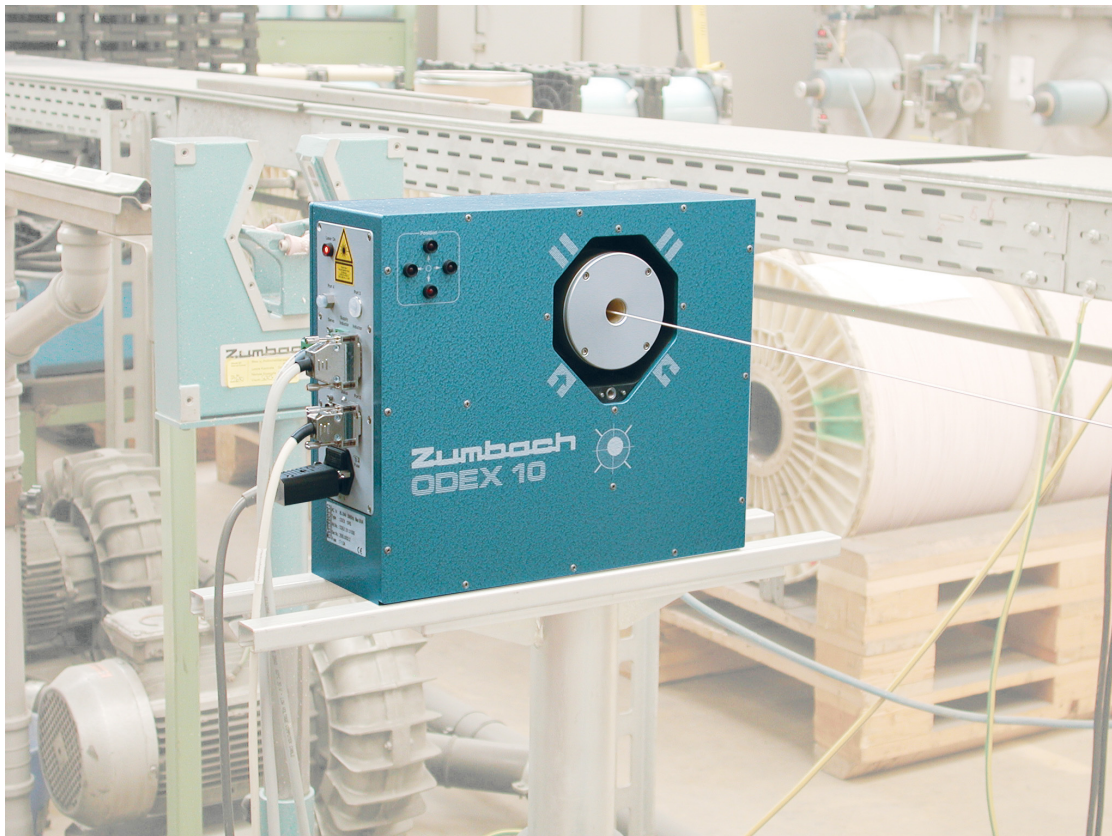

Leading manufacturers of data cables and of other cable products, where concentricity is of vital importance, have placed orders.

The ODEX® 10 is of latest fully digital technology, needs no calibration whatsoever and responds to today's "fit-and-forget" requirements.

It provides absolute value readings for concentricity, diameter and ovality on a continuous basis and at an accuracy within a metric micron.

It is extremely compact, fully stationary and easy to integrate in extrusion lines.

The calibration-free principle and its excellent accuracy and stability make it a gauge that can be used almost as simple as a diameter gauge.
